Summary

As a DevOps Engineer with 5+ years of experience, I have a strong
background in cloud infrastructure and automation. I have extensive
experience with Azure, GCP & AWS and have used these platforms
to deploy and manage a variety of applications.

In my previous role, I was responsible for building and maintaining
the cloud infrastructure and traffic for a large e-commerce company.
This included setting up continuous integration and delivery
pipelines, automating the deployment of applications, and monitoring
the performance and availability of systems.

I am skilled in a variety of tools and technologies, including
Terraform, Ansible, Git, GitHub, GitHub Actions, Bitbucket, Packer,
Jenkins, Docker, ARM Templates, CloudFormation, Azure DevOps,
AWS DevOps, Kubernetes, Nagios, and Splunk. I am also proficient
in programming languages such as Python, Groovy, and Bash,
which I have used to build custom automation scripts and tools.

In addition to my technical skills, I am a strong communicator
and team player. I enjoy collaborating with other engineers and
stakeholders to find solutions to complex problems, and I am always
looking for ways to improve processes and increase efficiency.
